

SOPHO iS3000 Series

Integrated communication solutions for IP/TDM telephony

The SOPHO iS3000 communication platform combines IP and traditional TDM telephony on one platform, so you are open for the future while protecting your existing investment in terminals, applications and infrastructure.

At a Glance

- Unified Communications
- Open SIP technology
- Smooth migration
- User efficiency

Unified Communications

The SOPHO iS3000 supports a wide range of applications that give you more power to implement your business strategies:

- IP technology: With voice and data in one network, you benefit from innovative productivity-boosting solutions
- Presence management: See in advance who is available and find the best way to reach them
- Fixed-mobile convergence: Seamlessly roam from your wireless LAN to cellular networks and back again with one device. You enjoy true mobility with high-quality voice communications.

Open SIP technology

Open standards mean you are free to connect any SIP phone available in the market, so you can build a true state-of-the-art work space including extensions, CTI applications, voicemail and Microsoft Office Communicator. Our special range of Polycom SoundPoint SIP phones brings you certified functionality and support.

Smooth migration

Benefit from the greatest flexibility in your IP migration strategy:

- Migrate step-by-step according to the individual depreciation of your existing terminals
- Integrate IP and TDM phones in a single numbering scheme, compile them in groups and administer those jointly using uniform tools.

You are assured of reliability, scalability and investment protection.

NEC PHILIPS

NEC PHILIPS UNIFIED SOLUTIONS

User efficiency

Empower your employees to do more, faster and more easily. SOPHO iS3000 supports powerful directory, unified messaging and presence services. Support your increasingly mobile workforce with conferencing, desk-sharing, teleworking and mobility features. Improve customer service levels with advanced operator and call centre solutions.

Unified Communications engine

With the SOPHO iS3000, you are assured of full legacy TDM features and extensive network support including PSTN/ISDN, PVN, Q.SIG/DPNSS, and SIP trunking. SIP peripheral support includes 3rd party media gateways and controllers, 3rd party feature terminals, with in-skin IP support or with a SIP server for extended capacity.

IP server solution

Now you can benefit from IP telephony and protect existing investments at the same time and on the same network. Expanding to a new office or site? Simply add a SOPHO iS3000 IP extension server, a pure IP solution that integrates with your SOPHO network and offers all the iS3000 features you have come to expect.

SIP-based IP-operator trunking

Save costs by using SIP trunking instead of ISDN or analogue trunk lines for your incoming and outgoing traffic.

Powerful applications

The SOPHO iS3000 is a proven call server for unified communication applications including: unified messaging, voicemail, presence management, and directory services; operator and call centre solutions; and mobile applications such as IP DECT and Voice over Wireless LAN.

Polycom SoundPoint SIP phones

For the SOPHO iS3000 we focused on the Polycom SoundPoint SIP phones with unsurpassed voice quality and advanced functionality. Ideal for users requiring multiple lines and powerful features, the SoundPoint range brings both traditional telephone capabilities and new converged applications to your business desktop.
